ABSTRACT:

PURPOSE: To control the ON/OFF of a power source in a camera with a simple operation at the required time.

CONSTITUTION: When a camera icon on a monitor screen is clicked, a CPU 42 outputs a control signal for turning on the power source to a power feeding control circuit 40. The power feeding control circuit 40 supplies the power source to a video camera 10, a pan head 14 and a camera control circuit 16 in accordance with the power source turning-on control signal. The CPU 42 also sets a camera use window on a monitor screen and outputs a power source turning-off control signal to the power feeding control circuit 40 in accordance with the operation for closing the camera window. The power feeding control circuit 40 disconnects feeding to the video camera 10, the universal head 14 and the camera control circuit 16 in accordance with the power source turning-off control signal.
